Re: SBRDSS report reference

In accordance Contract No.1, 28.11.2011 between RussTechno Indonesia and Sevastopol State University, Sevastopol's specialists (head of team - Ph.D. Kovalev N.I.) were involved with a set of equipment "Poisk" for remote search for oil and gas with identification its depth and deposit on Brantas Block in Java, Indonesia total area 3050 km². Off-shore – 2 blocks and On-shore – 3 blocks.

Previously, these areas were studied by traditional seismic methods and have more than 30 wells.

The study was performed in February 2012. Based on the results of study on Brantas Block by using remote method SBRDSS Sevastopol specialists discovered total 31 hydrocarbon anomalies.

SBDRSS remote method was proven by compare with seismic date available in Lapindo Brantas company. This method is cost effective and very accurate in depth and deposit result.

15.11.2010

Conclusion

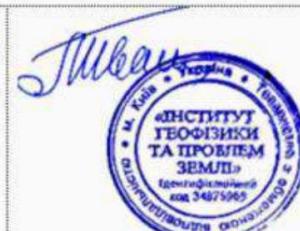

on the results of prospecting works performed by specialists of the
«Sevastopol National University of Nuclear Energy and Industry»
 in the territory of Texas, USA

Commissioned by the Institute of Geophysics and Problems of the Earth (Kiev, Ukraine) in 2010 specialists (Ph.D. Goh V.A., Ph.D. Kovalev N.I., Doctor of Geological and Mineralogical Sciences Filippov E.M., etc.) performed a search and exploration of natural gas deposits on the territory of Texas, USA using the equipment of the remote complex "Search". At the same time, remote search facilities were used to study the territory in the south of Texas, with an area of about 500 km².

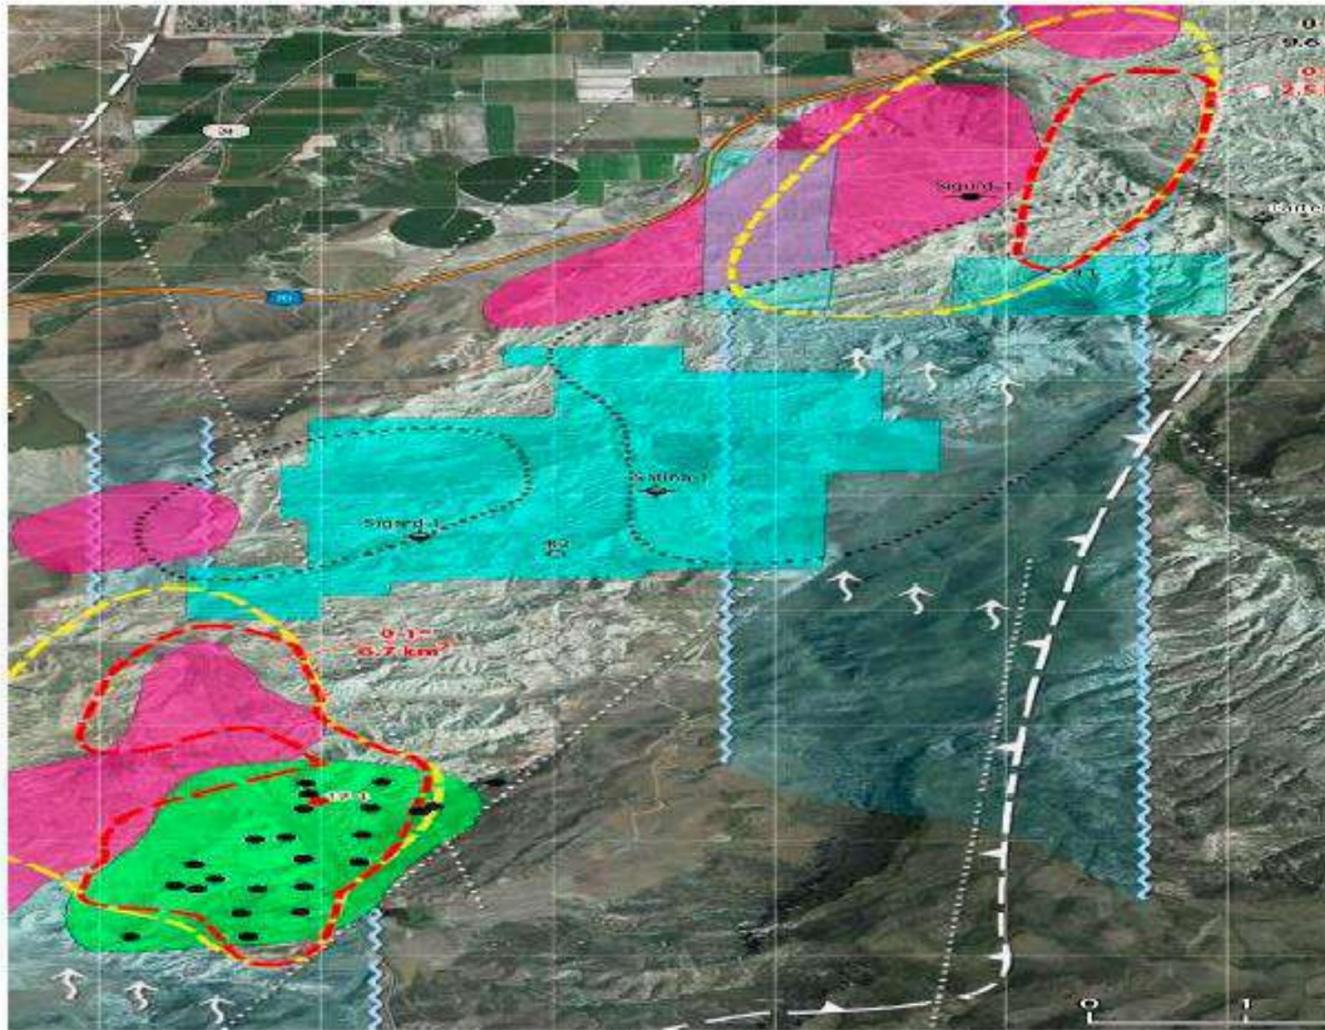

Based on the results of work on a given territory, underground natural gas accumulations were discovered having industrial significance, 3 points for drilling industrial wells were selected and surveyed.

The results of drilling a well at one of the proposed points confirmed the presence of a natural gas reservoir. The gas pressure in the deposit proved to be abnormally high, 620 atm, in accordance with the survey data.

Director of
 Institute of Geophysics and
 Problems of the Earth
 Pavel Ivashchenko

Mysal ü çin III

The oil accumulations and wells locations have proved the delineated anomalies. Recommendations were made to drill new wells at the identified anomalies to the north-east.

4-nji mysal

License block
Pel-105 in Aus-
tralia

Well Pine-1 location was
changed as suggested the
identified anomaly. The well
has been drilled and proved
to be productive.

THANKS FOR YOUR TIME

Serediș nokatlary

1. Uglewodorodlaryň we beý leki minerallaryň fokus meý danyny kesgitlemek ü çin ý okary çykdajyly we wagt tygş ytly tehnologiy a.
2. Bu tehnologiy a özboluş lydyr. Dü ný äde analog ş ekili gaý tadan iş lemek ý ok.
3. NMR we 1-nji we 2-nji ädimden soň uzakdan duý gur maglumatlaryň esasynda alnan netijeleriň ygtybarlylygy 60% -80%, 3-nji ädimde meý dan iş lerini ý erine ý etireniň izden soň 90% töweregى.
4. 3D seý smiki maglumatlary almak meý dany 2D seý smiki we beý leki geofiziki gözleglere wagt we pul goý mazdan gutarnykly bolup biler .
5. Seý smiki eý ý äm islendik sebitde edilen bolsa, bu NMR-RS tehnologiy asy buraw ý erlerini kesgitlemäge we tassyklamaga kömek edý är. Ş eý le hem burawlamazdan ozal uglewodorodlaryň , magdanlaryň we ý erasty suwlaryň ähtimal ätiý açlyklaryny bahalandyrmagá kömek edý är.
6. Bu tehnologiy a, Hindistanyň Manipur, Mizoram, Nagaland, J&K ş tatlary ý aly uzak we topografiki taý dan kyn ý erlerde örän peý dalydyr.
7. Uglewodorod we geotermiki suwlary 5000 m çuň luga çenli, 1500 metre çenli magdan känlerini, 1000 metr çuň luga çenli ý erasty agyz suwlaryny kesgitlemek.
8. 2-nji ädimden soň anomaliý anyň dik çözgü di 100m, 3-nji ädimden soň 30-50 m.

9. 1000 inedördü 1 km gözleg meý danynda NMR-RS gözleg iş leriniň ý erine ý etiriliş iniň umumy wagty. 1-nji we 2-nji ädim ü çin takmynan 2 aý , 1,2 we 3-nji ädim ü çin 5-6 aý .
