Conclusion

based on the results of search works performed by specialists SNUNEI on the territory of Mongolia

On the order of the Mongolian-Ukrainian company "Mont-Zim International" in 2008, the specialists of SNUAEI, (the head of the work of Ph.D. Kovalev N), carried out work on the search and exploration of natural deposits of the Shine-Usny-Gobi underground waters in the Mandah territory of the Somon Dornogobi aimag of Mongolia with the help of the equipment of the "Search" complex.

Based on the results of work in a given area, underground fresh water of industrial importance was discovered. The drilling results confirmed the presence of groundwater in the Gobi Desert at a depth of 320 m. (7 wells were drilled, water inflows from 20 m³/h to 25 m³/h were obtained).

Director of the company "Mont-Zim-International"

Golubnichy A.G.
